

## euroboard

The Euroboard system is a direct fix replacement fascia board. Euroboard itself is 18mm thick and is strong enough to be fixed direct to the roof rafters.

Eurosoffit fully complements the Euroboard system featuring neat integral ventilation slots giving an airflow in the roof space.

Euroboard can be used with alternative soffits giving a choice of presentations. The applications shown on the right highlight the various use of fascia and soffit combinations.

## ogee euroboard

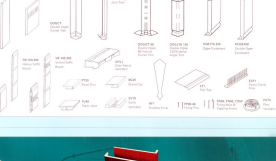

Similar to the standard Euroboard system this 18mm thick Ogee profile offers a distinctive alternative design, giving an outstanding individual appearance.

The Ogee Euroboard profile is another direct fix full replacement fascia board designed to be fixed direct to the roof rafters.

Ogee Euroboard can be also used with alternative soffits giving a choice of presentations as shown on the right hand side.

## ogee & standard capping boards

Euroclad offers either a 9mm thick Ogee and standard Capping board with a choice of soffits. The resulting presentation is smart and cost effective.

When fixing Capping Boards check thoroughly on the condition of the structural timbers, making sure they are sound and completely rot free. The Capping Board itself should be fixed to a new timber substrate, using this procedure will result in a fast clean long lasting installation.

## cladding

The Cladding available in a 120mm or 150mm depth is for exterior use and will give an excellent appearance to any project as well as practical weather protection for the property.

Euroclad's Shiplap-Cladding is designed with an extended tongue and groove leg which helps make for neat and smart installations.

The plants are complemented by a selection of dedicated trims which complete the Cladding system.

Butt Joint Trims. Fixed as an alternative to the Joint Trim they should be staggered and fixed where a button is located.
